You will certainly additionally discover various other title as well as themes from various writers to browse below.

Review

This book can provide an excellent framework for bolstering what is often an experiential process - doing a literature review. It is best seen alongside the supervisor, as a guide, through the multidimensional sea of academic literature' - British Educational Research Journal

I have been waiting for this book for five years. It sets out a number of important dimensions involved in the process of literature review and by clear signposting, diagrams, and examples will help the student to carry out her or his review more systematically. Learning how to carry out a literature review has always entailed the experiential. While this is a the best way of learning, it is only so providing that learning actually takes place during the experience (or by reflection afterwards). This book makes explicit those dimensions which could remain implicit or even missed by the student as they wade through all those books, papers, articles, and print-outs' - Kevin Maguire, Nottingham Trent University

Just exactly what I needed

By Cecelia Musselman

This is a short, concise text about writing a specific type of document — the scholarly literature review. The beauty of the book is that it also provides concise, easily usable breakdowns of argument analysis and idea mapping that apply across disciplines. Although the book claims to be for graduate students, it's well-suited to my undergraduate advanced writing class and affordable enough that I felt OK assigning it for just one major project. Students are already using the argument analysis section in other assignments.
