Printed in full color, this set of 201 MicroMnemonics cards makes medical microbiology clear to understand, fun to learn and easy to memorize by using mnemonics, cartoons and humor.

At first, we create a cartoon for each bug based on its name and associated features. This turns a "clueless" bug name into a vivid visual cue for easy recall. Then, the key points of the bug are summarized concisely in an outline format, supplemented with tables, diagrams, flowcharts and even Dr. Bright's Hint.

This set of cards is organized by microorganisms with an overview guide. Each topic starts with a classified list of major microbes and the diseases they may cause. The last section summarizes infections in different organ systems for a quick review.

Intended to serve as an excellent memory aid for learning medical microbiology, either for the courses or the board exams. It is suitable for anyone who wants to learn and memorize medical microbiology with ease and fun.

Looks really good

By forven

I just bought these to help with my studying for the USMLE. The deck is short...around 200 cards, but they cover all of the microbes you need to know for Step 1 (and more). It should take a dedicated person 2 weeks to memorize these cards (if you do 15 per day). I pulled out 5 random cards, looked at them for 2 minutes each, and was able to remember most of the details simply by remembering the picture on the card.

Get them.

LOVE, LOVE these cards!

By kwako

I wish I had these cards sooner. They help me remember organisms because each organism is like a "character." I'm a visual learner so the colors and pictures really keep the organisms in my memory and I can

associate them with pathology better. The cards also have mnemonics that can help you determine what drug treatments. Also, the cards show how to distinguish them based on gram stain, growth media, etc. They are really organize! I really love these cards! I suggest checking out the cards and how they look like to see if they will suit your learning style. It is definitely worth the money!

Great for med school

By Brad

These cards work great for med school microbiology class. I think it's probably best to use these cards in conjunction with another learning source like micro made ridiculously simple, just to help you get the big picture.

These are not flashcards in the traditional sense, but rather information organizing cards, like info graphics really.
