From School Library Journal

Grade 3-5-This biography describes Einstein's early struggle to harness and focus his extraordinary abilities; his relationships with his family and first wife; and, lending depth to the story, his most significant scientific discoveries. Brallier does an adequate job of presenting the facts and injects touches of humor into his text. He also discusses Einstein's exile from Germany in the early 1930s and his political views and activities, including the irony that the man who strove for a world without war helped to create the atomic bomb. There are several full-page sidebars, including one on "The Magnetic Earth" and another on "Hitler and the Nazis," and two time lines that contrast world events with those of the scientist's life. Black-and-white cartoon illustrations do little to enhance the text.

Who Was Albert Einstein?

“For an idea that does not at first seem insane, there is no hope.”

—Albert Einstein

Did you know that Albert Einstein was a very poor student who got kicked out of school? Well, he was. Yet he was one of the most brilliant people that the world has ever known.

Did you know that Albert was a peace-loving person who hated war? Well, he was. Yet his work led to the creation of the most destructive bomb ever.

Did you know that Albert was shy and hated publicity and attention? Yet he was a media superstar. Even now, fifty years after his death, Hollywood still makes movies about him—and T-shirts, coffee mugs, and posters are decorated with pictures of his famous face.

Who was Albert Einstein? You are about to find out.

Chapter 1

Born to Think

“There are only two ways to live your life. One is as though nothing is a miracle. The other is as though everything is a miracle.”

—Albert Einstein

Albert Einstein made his entrance into the world on March 14, 1879, in Ulm, Germany. He certainly didn't seem like an extraordinary child. He was chubby and pale with thick, black hair. He was so quiet and shy that his parents worried that there was something wrong with him. They took Albert to doctors. “He doesn't talk,” his parents explained. The doctors found nothing wrong.

The story goes that Albert didn't speak a word until he was three or four years old. Then suddenly, over supper one night, he said, “The soup is too hot.” Greatly relieved, his parents asked why he had never said anything before. “Because,” little Albert replied, “up to now, everything has been fine.” Is this story true? There's no proof.

Most boys his age played soldier and other rough-and-tumble games. Not Albert. When Albert saw real soldiers marching with their blank faces, they frightened him. Albert preferred to stay by himself and daydream. He enjoyed playing with blocks and building houses out of playing cards—some of them were fourteen stories high.

His parents continued to worry about their lonely and quiet son. They took him to more doctors. “Could there be something wrong with his brain?” his parents asked. Once again, doctors found nothing wrong with the boy. It was just his nature. He was quiet. He was a thinker.

Albert's father and uncle had a business that sold batteries, generators, and wire. Electricity fascinated Albert. It was invisible, powerful, and dangerous. Electricity was like some mysterious secret. Albert pestered his father and uncle with lots of questions. How fast is electricity? Is there a way to see it? What's it made of? If there's electricity, could there be other strange and mysterious forces in the universe?

Albert enjoyed thinking about a world beyond the one that could be seen or explained. As he later said, “Imagination is more important than knowledge. Knowledge is limited. Imagination encircles the world.”

Perpetuating An Urban Legend About Einstein

By Harold A. Geller

I happened upon this series and bought this book in the hopes it would be one I could read to children about Albert Einstein. In general, the writing is excellent and age appropriate. Some science concepts associated with Einstein are addressed, again at the appropriate level for the intended audience. However, I simply can not recommend a book that perpetuates the urban legend that "Albert was expelled from school." This is simply not the case. You can even find a copy of Einstein's high school diploma on the web. He did have issues with his high school teachers, but that did not lead to his being expelled. Apparently it led to his taking the necessary exams to graduate early. I also take issue with the author in a side bar where he discusses the "famous formula" linking energy and matter. The author highlights this sidebar with "Warning! Hard Stuff!". This kind of label becomes a self fulfilling prophesy in later years. If a child is told at a young age that something is "hard stuff", educators have seen that they hold on to this view well into their later years. Do a search for the study called "A Private Universe" and maybe you will better understand how misconceptions from early youth can stay with a person into their college years.

Full of Information!

By Jane N.

I thought Who Was Albert Einstein? was a great book. Hats off to Jess Brallier! I have read this book two or three times, which is rare for me, since I do not like to re-read things, so that must tell you how good this book is! I learned a lot of things like he was born on March 14, 1879, he had two wives, he wasn't the best father (in his own words), his brain is floating around in a jar today, 52 years after his death, and many more interesting things! You should read this book, and I would even recommend it to adults!!!

Easy read but full of inconsistencies and misconceptions

By Sal Asutra

I read this after my nine year old daughter and found it to be age appropriate and generally informative, however there seemed to be a clear religious bias to the text. Specifically, page 19 indicates that science did not affect his beliefs in a religious system, but incited him to learn to "read God's mind." Chapter 6 is captioned, "Unless the concept of peace based on law gathers behind it the force and zeal of a religion, it can hardly hope to succeed." The actual quote is "One strength of the communist system of the East is that it has some of the character of a religion and inspires the emotions of a religion. Unless the concept of peace based

on law gathers behind it the force and zeal of a religion, it can hardly hope to succeed." Clearly the quote placed in context is far different than original one presented in the text.
